

How to Use	
Purpose	The developer's record that the change works as specified and does not break existing output. It is the test evidence the peer reviewer checks in EDI-TPL-02 Peer Review Checklist. Without it, the change cannot be approved.
When	Starts The change ticket is approved and the new or updated map is built in DEV. Ends Every scenario has a PASS status, and this workbook, the input and output files and the regression comparison are attached to the change ticket. Then proceed to EDI-TPL-02 Peer Review Checklist. Who The map developer who made the change.
Steps	1. Complete the Overview tab. Copy the ticket and map details exactly as they appear in the change ticket and the translator. 2. On the Test Scenarios tab, add one row per scenario. Every change in the ticket needs at least one scenario, plus at least one negative or boundary case where the change allows it. 3. Write the Expected Result for each scenario from the mapping spec before running any test. 4. Run the tests in the order on the Test Plan tab. Record the Actual Result, Status and Output File Name / Notes for each scenario. 5. If a scenario fails, fix the root cause, rerun it and keep the history in Output File Name / Notes, e.g. "First run failed (second qualifier pair not mapped); fixed in map v3 and rerun." 6. Attach this workbook, the input and output files and the regression comparison (diff report or screenshot) to the change ticket.
Notes	• Status is PASS or FAIL only. List only the scenarios that apply, and delete unused rows. • A brand-new map has no production version, so there are no regression scenarios. Say so in Change Description so the reviewer can mark PR-14 to PR-18 N/A. • Regression means running the same input files through the production version and the new version, then comparing the outputs. If the map is shared by several trading partners, cover each affected partner. • For integration scenarios, record the interchange control number (ISA13 for X12, UNB05 for EDIFACT) in Output File Name / Notes so the run can be traced in the translator logs. • Use production-like test files with fictional or masked data. No real PHI or PII. • Drop-down values are on the Appendix tab.
Why the expected result comes first	An expected result written after the test tends to describe whatever came out. Writing it first, from the mapping spec, is what makes a PASS mean something, and it gives the reviewer a fixed standard to check against (EDI-TPL-02, PR-03 and PR-12).

Overview	
Change / Ticket ID	CHG0012345
Change Description	Add UPC mapping to the inbound 850 map: PO107 maps to ItemUPC when PO106 = UP. Existing vendor item (VN) mapping is unchanged.
Objective	Validate the new or updated map and, for existing maps, confirm existing functionality is not impacted.
Trading Partner(s) (if applicable)	Sample Retailer Inc.
EDI Standard	X12
Message Type	850 (Purchase Order)
Version / Release	004010
Direction (Inbound/Outbound)	Inbound
Source / Target Format	X12 → XML
Map Name	COMP_850_IB
Map Version	3
Test Environment(s)	DEV (unit), QA (integration and regression)
Developer	alowinarp
Test Date	2026-10-05 to 2026-10-07

Test Plan

Test Execution Flow

1. Test Preparation

- Prepare a test input file for each scenario in the Test Scenarios sheet, including negative and boundary cases. Write the Expected Result from the mapping spec before running any test.

2. Unit Testing

- Run each test file through the map to validate transformation logic, field mappings and code conversions. Compare the output to the Expected Result, then record the Actual Result and Status.

3. Integration Testing

- Process the file end-to-end in DEV/QA (receipt, envelope validation, translation, routing and delivery). For inbound, confirm the functional acknowledgment (997/999 or CONTRL) is generated. Record the Actual Result and Status.

4. Regression Testing

- Existing maps only: process copies of recent production files, with sensitive data masked. Compare the output to the current production output to confirm nothing changed unintentionally. Record the Actual Result and Status.

5. Review

- Confirm all scenarios have a PASS status, then submit the test results with the Peer Review Checklist for approval before promoting to PROD.

Notes:

If a scenario fails, fix the root cause and rerun.

Start from Step 2 for map changes and from Step 3 for configuration-only changes, then rerun the affected regression scenarios.

Test Scenarios and Results							
ID	Test Type	Input File Name	Scenario	Expected Result	Actual Result	Status	Output File Name / Notes
TC-001	Unit Testing	850_TC001.edi	PO1 with UPC qualifier (PO106 = UP)	PO107 maps to ItemUPC	As expected	PASS	850_TC001_out.xml
TC-002	Unit Testing	850_TC002.edi	PO1 with vendor item qualifier (PO106 = VN); existing logic	PO107 maps to VendorItemNumber; ItemUPC blank	As expected	PASS	850_TC002_out.xml
TC-003	Unit Testing	850_TC003.edi	PO1 with two qualifier pairs (PO106 = UP, PO108 = VN)	UPC maps to ItemUPC and vendor item to VendorItemNumber	As expected (rerun)	PASS	850_TC003_out.xml; first run failed (second qualifier pair not mapped); fixed in map v3 and rerun
TC-004	Unit Testing	850_TC004.edi	Boundary: UPC with leading zeros (PO107 = 001234567890)	Leading zeros preserved in ItemUPC	As expected	PASS	850_TC004_out.xml
TC-005	Unit Testing	850_TC005.edi	Negative: UPC shorter than 12 digits (PO107 = 12345678901)	Translation error for invalid UPC length; no output generated	As expected	PASS	None (translation error logged)
TC-006	Unit Testing	850_TC006.edi	Negative: unsupported qualifier (PO106 = ZZ)	Line translated; ItemUPC and VendorItemNumber blank	As expected	PASS	850_TC006_out.xml
TC-007	Unit Testing	850_TC007.edi	Boundary: 200 PO1 lines	All 200 lines in output; LineCount matches CTT01 (200)	As expected	PASS	850_TC007_out.xml
TC-008	Unit Testing	850_TC008.edi	Date conversion: DTM*002 requested delivery date	DTM02 20261020 maps to RequestedDeliveryDate 2026-10-20	As expected	PASS	850_TC008_out.xml
TC-009	Integration Testing	850_TC009.edi	End-to-end inbound 850 via SFTP in QA	File received, translated and XML delivered to the ERP inbound folder; 997 generated with AK9*A	As expected	PASS	850_TC009_out.xml; ISA13 000000101
TC-010	Integration Testing	850_TC010.edi	Negative: invalid ISA05 qualifier	File rejected; no 997 generated	As expected	PASS	None (rejected at envelope); ISA13 000000123
TC-011	Integration Testing	850_TC011.edi	Negative: duplicate interchange control number	Duplicate interchange flagged; file not translated	As expected	PASS	None (duplicate rejected); ISA13 000000101
TC-012	Integration Testing	850_TC012.edi	Negative: GE01 does not match the number of transaction sets	997 generated with AK9*R (AK905 = 5); group not translated	As expected	PASS	None (group rejected); ISA13 000000124
TC-013	Integration Testing	850_TC013.edi	Three 850s (ST/SE) in one functional group	Three XML documents delivered; one 997 with AK9*A*3*3*3	As expected	PASS	850_TC013_out_1.xml to _3.xml; ISA13 000000125
TC-014	Regression Testing	PROD_850_20260928_masked.edi	Production 850 with vendor item (VN) qualifiers only	Output matches current PROD output	No differences in file compare	PASS	850_TC014_out.xml
TC-015	Regression Testing	PROD_850_20260930_masked.edi	Production 850 with SAC allowances and multiple N1 ship-to loops	Output matches current PROD output	No differences in file compare	PASS	850_TC015_out.xml
TC-016	Regression Testing	PROD_850_20261001_masked.edi	High-volume production 850 (450 PO1 lines)	Output matches current PROD output	No differences in file compare	PASS	850_TC016_out.xml

Appendix

A. Field Descriptions

Tab	Field	Description	Example
Overview	Change / Ticket ID	Change request or ticket that authorizes the work	CHG0012345
Overview	Change Description	What is being built or changed	Add PO1 UPC qualifier mapping
Overview	Objective	Purpose of testing (pre-filled; edit only if the scope differs)	-
Overview	Trading Partner(s)	Partner(s) the map applies to; leave blank for generic maps	Sample Retailer Inc.
Overview	EDI Standard	EDI standard of the message	X12 / EDIFACT / TRADACOMS
Overview	Message Type	Transaction set (X12) or message (EDIFACT)	850 / ORDERS / ORDHDR
Overview	Version / Release	Version (X12) or directory (EDIFACT)	004010 / D.96A / 9
Overview	Direction	Inbound (partner to us) or Outbound (us to partner)	Inbound
Overview	Source / Target Format	Input and output formats of the map	X12 → XML
Overview	Map Name	Map name as deployed in the translator	COMP_850_IB
Overview	Map Version	Map version under test	3
Overview	Test Environment(s)	Environment(s) used for testing	DEV, QA
Overview	Developer	Map developer who ran the tests	-
Overview	Test Date	Date testing started (or a date range)	2026-10-05
Test Scenarios	ID	Unique scenario ID	TC-001
Test Scenarios	Test Type	Testing step the scenario belongs to - select from drop-down list	Integration Testing
Test Scenarios	Scenario	Condition being tested; start with "Negative:" or "Boundary:" where it applies	Negative: invalid ISA05 qualifier
Test Scenarios	Input File Name	Test file used for the scenario	850_TC001.edi
Test Scenarios	Expected Result	Expected outcome per the mapping spec, written before the test runs	File rejected; no 997 generated
Test Scenarios	Actual Result	Observed outcome	As expected
Test Scenarios	Status	Result of testing the scenario	PASS
Test Scenarios	Output File Name / Notes	Output file produced, if any, plus fixes, reruns or other context. For integration tests, include the interchange control number.	None (rejected at envelope); ISA13 000000123

B. Drop-Down List Values

Status	Test Type	Direction	
PASS	Unit Testing	Inbound	
FAIL	Integration Testing	Outbound	
	Regression Testing
