How to Use

Purpose

Records the checks performed before, during and after a production deployment, and the final result. It confirms the change was tested, peer reviewed and approved before go-live, with a rollback plan in place. Attach the completed checklist to the change ticket.

When

Starts Peer review (EDI-TPL-02) is Approved and the change window is scheduled.

Ends Every Closure check is Yes, and Deployment Result and Closure Date are filled in on the Overview tab.

Who The deployer, who also validates the change in production and closes the ticket.

Steps

1. Complete the Change Details and Rollback Plan on the Overview tab before the change window opens.
2. Work through the Deployment Checklist tab in order. For each check, set Result to Yes, No or N/A and add Notes where needed.
3. Do not start the Deployment phase until every Pre-deployment check is Yes or N/A.
4. If a rollback trigger occurs, restore the rollback version, notify the partner contact, and follow the reprocessing approach on the Overview tab.
5. Record the Actual Deployment Datetime and Final Map Version (PROD) on the Overview tab, then complete the Closure checks.
6. Set Deployment Result to Successful, Rolled Back or Completed with Issues, then enter the Closure Date.

Notes

- Use N/A only for "where required" or "where applicable" checks that do not apply (for example DC-06 integration testing for a configuration-only change), and give the reason in Notes.
- A brand-new map has no production version. Record "None – new map" as the Rollback Version and mark DC-11 and DC-15 N/A.
- Checklist Status updates automatically. A Deployment Result of Successful turns red if any check is No or unanswered.
- Completed with Issues means the change is live but something is outstanding. Describe it in Notes on the affected check and record the follow-up CR ID.
- Record datetimes in 24-hour format (e.g. 2026-10-06 21:45) in the change window's time zone.
- Portfolio sample. All entities and data are fictional.

Why the rollback plan comes first

A rollback plan written during an incident is a guess made under pressure. Agreeing the version, trigger, reprocessing approach and partner contact before the window opens turns a failed deployment into a routine, reversible step.

Overview	
Change Details	
Change / Ticket ID	CHG-2026-0418
Map Name	COMP_850_IB
Map Version	v1.4
Target Implementation Datetime	2026-10-06 21:00 (PHT)
Assigned To	J. Reyes (EDI Developer)
Approved By	M. Santos (EDI Lead); CAB approved 2026-10-02
Rollback Plan	
Rollback Version *(current production)*	v1.3 (PROD since 2026-07-14); export saved to /deploy/backup/CHG-2026-0418/COMP_850_IB_v1.3.mxl
Rollback Trigger	Rejected transactions, data corruption, or business-blocking error. Specific to this change: any inbound 850 from Harbor Fresh Markets fails translation, or an order posts to the ERP without a ship-to store.
Reprocessing Approach	Reactivate v1.3. Pull the inbound 850s received after the cutover from the mailbox archive and reprocess them through v1.3 in received order. Confirm order counts against the ERP, then notify the partner EDI contact (R. Cruz, Harbor Fresh Markets) by email and phone within 30 minutes of the decision.
Deployment Outcome	
Checklist Status *(automatic)*	**All checks Yes / N/A**
Actual Deployment Datetime	2026-10-06 21:08 (PHT)
Final Map Version (PROD)	v1.4
Deployment Result	Successful
Deployed By	J. Reyes
Closure Date	2026-10-08

Deployment Checklist			
ID	**Item to Check**	**Result**	**Notes**
A. Pre-deployment			
DC-01	Change request approved (Approved By recorded on the Overview tab)	Yes	CHG-2026-0418 approved by M. Santos at CAB on 2026-10-02.
DC-02	Deployment window confirmed	Yes	Window 2026-10-06 21:00–22:00 PHT, outside the partner's order cut-off.
DC-03	Required stakeholders notified, including the partner if the change affects them	Yes	EDI Ops, Order Management and the Harbor Fresh Markets EDI contact notified 2026-10-03.
DC-04	Business sign-off recorded; partner sign-off too if required.	Yes	Business sign-off from Order Management (A. Lim) 2026-10-03. Partner sign-off not required: no change to the partner's outbound spec.
DC-05	Unit testing passed (EDI-TPL-01)	Yes	TC001–TC006 passed in EDI-TPL-01.
DC-06	Integration testing passed where required (EDI-TPL-01)	Yes	TC007–TC008 passed: multi-store PO posted to ERP test with correct ship-to on each line.
DC-07	Regression testing passed where required (EDI-TPL-01)	Yes	Regression set TC009–TC012 passed; single-store POs unchanged from v1.3 output.
DC-08	Peer review (EDI-TPL-02) completed and approved, critical findings closed	Yes	EDI-TPL-02 approved 2026-10-05. One critical finding (N1*ST missing) fixed in v1.4 and rechecked.
DC-09	Correct deployment artifact identified	Yes	COMP_850_IB_v1.4.mxl, checksum matches the peer-reviewed build.
DC-10	Production map/version verified	Yes	PROD showed v1.3 active before cutover, as expected.
DC-11	Backup or previous version available	Yes	v1.3 export on file (see Rollback Version on the Overview tab).
DC-12	Dependencies confirmed (code lists, business processes, envelopes)	Yes	Store code list SHIPTO_STORES current; business process HFM_850_IN and envelope unchanged.
DC-13	Rollback procedure reviewed (Rollback Plan on the Overview tab)	Yes	Reviewed with M. Santos 2026-10-05.
B. Deployment			
DC-14	Correct production environment confirmed	Yes	Connected to PROD (prd-sterling-01); environment banner confirmed.
DC-15	Current production map/version backed up	Yes	v1.3 exported at 21:02 before check-in.
DC-16	New map deployed	Yes	v1.4 checked in at 21:05.
DC-17	Compilation/validation successful	Yes	Compiled with 0 errors, 0 warnings.
DC-18	Correct version activated	Yes	v1.4 activated at 21:08; v1.3 retained as inactive.
DC-19	Associated configuration deployed where required (trading partner relationship, routing, code lists)	N/A	Map-only change. No trading partner, routing or code list configuration changed.
DC-20	No deployment errors observed	Yes	No errors in the deployment log.

ID	Item to Check	Result	Notes
C. Post-deployment			
DC-21	Production validation executed; first production transaction processed end to end	Yes	First PROD 850 (ISA control 000004512, 3 stores) processed end to end at 21:34.
DC-22	Expected output confirmed	Yes	Order posted to ERP with the correct ship-to store on all 3 lines.
DC-23	Routing confirmed	Yes	Routed to the ERP order inbound queue as expected.
DC-24	Acknowledgment/response received and reconciled where applicable	Yes	997 sent to the partner and accepted (AK5*A).
DC-25	Monitoring/logs reviewed	Yes	Translation and business process logs reviewed 21:34–22:00.
DC-26	No unexpected errors detected	Yes	No translation errors in the first 14 inbound 850s through 2026-10-07 09:00.
DC-27	Business/requestor notified where required	Yes	Order Management (A. Lim) notified 2026-10-06 22:05.
DC-28	Hypercare owner and end date assigned	Yes	Hypercare owner J. Reyes, through 2026-10-08 18:00.
D. Closure			
DC-29	Deployment evidence attached (EDI-TPL-01, EDI-TPL-02 and this checklist)	Yes	EDI-TPL-01, EDI-TPL-02 and this checklist attached to CHG-2026-0418.
DC-30	Final version recorded (Final Map Version (PROD) on the Overview tab)	Yes	v1.4 recorded on the Overview tab.
DC-31	Production validation documented	Yes	PROD 850 and 997 evidence attached to the ticket.
DC-32	Change record updated	Yes	Change record updated with actual cutover time and result.
DC-33	Change closed	Yes	Closed 2026-10-08 after hypercare ended with no issues.
